AT FABSPPEED WE TAKE GREAT PRIDE IN OUR PRODUCTS AS IT'S VITAL TO OUR FUTURE SUCCESS.

Pre-cast concrete is an ideal material to link the practical with the desirable. Both clients and designers enjoy the bespoke designs you can achieve with pre-cast but are limited to it's colour and texture. FabSpeed provide a specially designed brick which can interlock with the concrete and create a brick clad building without the need for employing a bricklayer.

Where bricks are not suitable, cut bricks are used, a positive key is formed, we do this by using the supplied bricks perforations or alternatively for solid bricks we can produce the Dovetail or Chamberlain cut. With all three designs the perforations act as a key once the concrete is ured giving you the ultimate adhesion.

#### PRECAST DESIGNS...

##### CHAMBERLAIN CUT

The Chamberlain special has been produced to create the ultimate interlock for precast concrete. This design can be used with any brick type, whether it is perforated, solid or frogged.

##### PERFORATED CUT

The perforated precast brick special is simple and cut between 50-55mm towards the middle of the brick. This, as you can see above creates a key for the concrete to be poured in and set.

##### DOVETAIL CUT

The traditional reliable keying method for precast. The Dovetail design has been around for years and can only be used on solid or perforated bricks.

WE EMBRACE YOUR JOURNEY, STRIVING TO REMAIN YOUR TRUSTED SUPPLIER THAT DELIVERS ON SERVICE, INNOVATION AND QUALITY TO ALL OF OUR CLIENTS.

## WHAT YOU NEED TO KNOW

Brick-faced precast panels offer all the advantages of the natural materials, but provide a great alternative to traditional construction and the reduction of wet trades on site.

Precast cladding also eliminates most of the concerns associated with traditional brick construction.

Because everything is manufactured off-site. Panels can be produced in large sizes; typically grid with "x" story height - this lowers the cost and increases the speed of enclosure compared to hand-set brickwork.

## HOW WE CAN HELP

Fabspeed understands that in pre-casting speed is of the essence and producing a high amount of cut bricks per day is pivotal.

We have invested significantly in our factories, production team and specialist machinery to produce high quality brick cutting which is capable of producing thousands of perfectly cut bricks per day.

Our flexibility in design enables us to cut any brick, whether it is solid, frogged or perforated.

For total peace of mind, much of what we do includes strict quality control of all materials used. We are certified to current ISO:9001 standards meaning that the highest quality of accuracy and precision are maintained.

To discuss your latest project or if you have any further questions please do not hesitate to contact us on either 01484 865 572 or 01491 614 774.
